January 1989

GPO-Sponsored Study, "Users of Academic and Public Depository Libraries"

Professors Charles McClure and Peter Hernon report an overwhelming response from depository libraries to surveys distributed in support of this study. Of the 1,050 libraries contacted, 850 of them responded with some 48,000 user tickets, 850 library information forms, and 850 user logs. Data from these returns are now being loaded by the contractor into a data file for computer processing and statistical analysis.

While the volume of library returns is certainly impressive, a high percentage of those submissions were received by the contractor several weeks beyond deadline. To compensate for the time lost from delayed library submissions, the delivery date for the contractor's final report to GPO has been pushed ahead to February 15, 1989.

Sale of "Needs and Offers" Material

Many depository libraries that list items on the national "Needs and Offers" list are receiving letters from private firms offering to buy certain materials offered on the list. All libraries are reminded of directions for the sale of depository material as established in Part A, Chapter 10 of the Instructions to Depository Libraries, which in pertinent part states:

Libraries cannot materially benefit from the disposal of depository holdings as these materials remain Government property. If, after following the procedures listed below, the depository materials entrusted to you are sold as publications or as waste paper, the proceeds with a letter of explanation must be sent to the Superintendent of Documents. Depository materials can never be bartered for goods or services.

If you have any questions about this requirement, please contact the Chief, Inspection Team, U.S. Government Printing Office, Library Programs Service (SLL), Washington, DC 20401.

Basic Management Skills Institute For Depository Librarians

In conjunction with the October 1987 Depository Library Council meeting, the Association of Research Libraries Office of Management Studies offered a Basic Management Skills Institute for Depository Librarians. It was considered very successful by the 29 participants. On a scale of 1 (highly dissatisfied) to 10 (completely satisfied), 93% rated the program 8 or above for satisfaction. Eighty-six percent of the participants rated it 8 or above for usefulness.

ARL/OMS and GPO would again like to offer this 3 1/2 day workshop in conjunction with the spring Depository Library Council meeting. As with the previous program, the topics to be covered will be motivation of staff, leadership/management styles, decision-making, effective use of groups, conflict management and communication. Participants will gain proficiency in the areas of organizational diagnosis, group leadership and interpersonal skills.

The Institute will be offered March 11-14, 1989. It will be held at the same hotel as the Depository Library Council meeting, the Pittsburgh Hilton. The cost of participation is \$375 plus travel and room and board. Rooms will cost \$56 (single) and \$66 (double). The workshop will begin at 6:30 p.m. Saturday March 11, and it will end Tuesday March 14, at 3:30 p.m.

Twenty participants are required to present this Institute. In order to complete planning for this program, registrations must be received by February 1. Questions may be addressed to: Susan Jurow, Program Officer for Training ARL/OMS, 1527 New Hampshire Avenue, NW, Washington, DC 20036, phone number (202-232-8656).

Simplifying Classes for Area Wage Surveys

The explosion of new classes for every new title in the Area Wage Survey series (L 2.121/nos. :) has created a problem for both the Library Programs Service and the depository libraries. There are already approximately 250 classes for this series. More classes are added each day because of the classification policy to establish a new class for every city. This proliferation of classes is causing a severe problem in DDIS (Depository Distribution Information System), as the 16 class stems per item number limit has already been reached in some states with numerous metropolitan areas.

LPS has developed the following proposal to stop the endless creation of new classes in this series. LPS requests that the Depository Library Council consider this proposal and give LPS a response by February 1, 1989. In the meantime, LPS will put an immediate moratorium on the establishment of new classes for this series pending Council's response.

LPS recommends establishing a class stem for each state and cutter by city within that state. This would mean approximately 100 classes to cover both the annual and summary reports. The assignment of class numbers would be based on the state item number breakdown listed on page 15 of the GPO Classification Manual. This practice would also follow the current item number breakdown used for distribution. A library selecting item 768-B-1 would receive all the annual and summary reports for Alabama, but would only have to deal with two classes; one for the annuals (L 2.121/1:) and one for the summaries (L 2.122/1:). An example of this proposal follows:

L 2.121/1:(CT/date)	<u>Area Wage Survey, Alabama</u>	(annual)	768-B-01
L 2.121/2:(CT/date)	<u>Area Wage Survey, Alaska</u>	(annual)	768-B-02
L 2.122/1:(CT/date)	<u>Area Wage Survey, Alabama</u>	(summary)	768-B-01
L 2.122/2:(CT/date)	<u>Area Wage Survey, Alaska</u>	(summary)	768-B-02

Under this arrangement, the annual reports would be separated from the summaries on the shelf but would still be alphabetical by state and within each class, alphabetical by city. Some libraries may prefer to have annuals and summaries for a

particular state side by side, but LPS has already made class number distinctions between the annuals (i.e. L 2.121:) and summaries (i.e. L 2.122/(:). LPS recommends maintaining this pattern to minimize confusion during the transition. The alternative suggestion that we could use /summaries on the annual's class will not work well because often the area covered in the summary is not the same area covered in the annual.

Two problem areas still remain. The first concerns specific subject surveys like the Moving and Storage Survey (L 2. 123:). LPS proposes following the policy of setting each series up by state and then cuttering, but this will involve reclassifying some titles now located at L 2.113/5:. The second issue concerns handling those surveys that cross jurisdictional boundaries. Item number assignment is currently determined by the first jurisdiction named, and LPS would follow that practice when assigning the class.

The following pages illustrate the results of adopting these recommendations. Many of the class stems would remain the same, with only their titles changed. Approximately 79 classes for individual jurisdictions would be deleted, and the establishment of new classes halted for these reports. LPS would make sure that libraries are given complete and timely information, in order to reduce the negative impact of the changeover. Item selection and distribution will not be affected by implementing this recommendation.

Community Right-To-Know:
Publicly Available Chemical Release Information

The Environmental Protection Agency (EPA) is creating a Toxic Chemical Release Inventory (TRI) which will be available to the public. Mandated under the Emergency Planning and Community Right-To-Know Action of 1986, the Inventory contains provisions for the reporting, by industry, of over 300 toxic chemicals into the air, water, and land. Data submitted to EPA includes the names and addresses of facilities which manufacture, process or use these chemicals, as well as estimated amounts released to the environment or transferred to waste sites. The law calls for EPA to collect this data on an annual basis and to make it publicly available through a computer data base and other means. Among the groups expected to access TRI are Federal, state and local government agencies, health care professionals and institutions, academic and research institutions, public interest groups, industrial organizations, unions, and the general public.

EPA is working to provide the public with access to the Toxic Release Inventory data by spring of 1989 through: an online TRI data base within the TOXNET system at the National Library of Medicine; a TRI CD-ROM data base; and microfiche sets of the TRI data. The CD-ROM project is one of the Government Printing Office Pilot Projects for uses of new technology. As part of this project, the TRI CD-ROM data base will be distributed to 400 GPO depository libraries. EPA has plans to distribute an additional 200 CD-ROM copies to university libraries and microfiche sets of TRI data to state and county libraries.

EPA and NLM staff plan to attend the ALA Midwinter meeting in Washington, DC and will present a general overview of the TRI projects at the GODORT FDTF Information Update session which is scheduled for 9:30-12:30 on Saturday, January 7. Individuals interested in additional TRI project details and in opportunities to help make this information publicly available are invited to meet in a small group at the FDTF Work Group Meeting which is scheduled for 9:30-12:30 on Sunday, January 8.
